

## Resolution of Forces

Find the  $\mathbf{i}$  and  $\mathbf{j}$  components of the vector  $\mathbf{v}$  shown in the following diagram:

The  $\mathbf{i}$  component is

$$\begin{aligned} & |\underline{v}| \cos(\pi - \theta) \\ &= |\underline{v}| \left[ \overset{=1}{\cos \pi} \cos \theta + \overset{=0}{\sin \pi} \sin \theta \right] \\ &= \underline{\underline{-|\underline{v}| \cos \theta}} \end{aligned}$$

The  $\mathbf{j}$  component is

$$\begin{aligned} & |\underline{v}| \cos\left(\frac{\pi}{2} - \theta\right) \\ &= |\underline{v}| \left[ \overset{=0}{\cos \frac{\pi}{2}} \cos \theta + \overset{=1}{\sin \frac{\pi}{2}} \sin \theta \right] \\ &= \underline{\underline{|\underline{v}| \sin \theta}} \end{aligned}$$

$$\text{So } \underline{\underline{\underline{\underline{\underline{v}}}}}} = -|\underline{v}| \cos \theta \underline{\underline{\underline{\underline{\underline{i}}}}} + |\underline{v}| \sin \theta \underline{\underline{\underline{\underline{\underline{j}}}}}$$
